

Live React Documentary:

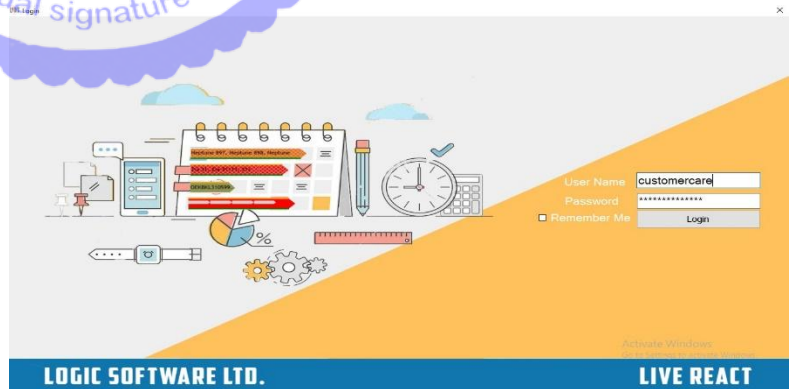

About:

An integrated planning board specially designed only for Readymade Garments (RMG) operation. The integration feature of these planning tools has opened a new window for perfect planning by a planner while all relevant nature of the order, TNA, Work-study/IE, supply chain status, production status, manpower status to allocate the lines and machine status, are available to visualize. Moreover, the hourly strip splitting (Day Brake) facility will drive this planning board as per the management need. The planner's plan reflection on Platform ERP from the board will help the management to peek or restrain the perfect or wrong plan before execution.

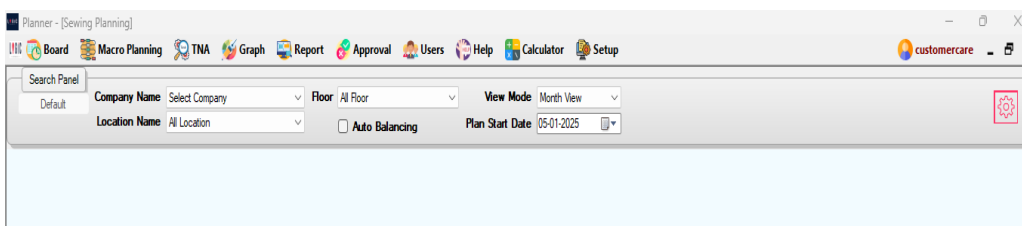

Login Page:

Planning application is fully ERP integrated. User ID is created in ERP and privileges are assigned based on Company and Location.

Many Bar:

After logging in, you will see this menu bar. Planner can generate the board based on the Company, Location and Floor. The planner will generate all Locations or Floors at once, as well as independently.

Board:

After generating, this layout will be displayed. Each column represents the **Date** and each row represents the **Sewing Line**. Here, two different styles of shading are used to represent the current and previous dates. The current date is shown by the right

shade and the previous date is shown by the left. The indicated list is the 'Sewing Line' that was created in ERP. The line Manpower and its average efficiency are presented in brackets.

Board interface showing a grid of dates (columns) and sewing lines (rows). The grid uses shading to represent current and previous dates. A list on the left shows sewing lines with manpower and efficiency in brackets.

Create Plan:

Create Plan interface showing a grid of dates (columns) and sewing lines (rows). A context menu is open over the grid, showing options like 'Add Strip/Load List', 'Search Plan', and 'Capacity Adjustment'.

The right mouse button needs to be used to add the strip or plan. A new window called "Load list" will then open.

LoadList:

Load List interface showing a table with columns for tracking, job, buyer, style, internal ref, job qty, PO number, color, item name, plan qty, production qty, production balance, planned qty, yet to plan qty, SMV, and allocated manpower.

You may get all the information you need from the loadlist, which is sourced from the platform ERP.

Data can be searched by :

Company, Location, Buyer, Production Dept., Brand,

Season, Job No, Style Ref, PO No, Internal Ref, SMV, Item, Date Range.

Load List search filters. Red boxes highlight the search criteria: Company, Buyer, Prod. Dept., Sub Dept., Season, Season Year, Job No, Style Ref, PO No, Internal Ref, SMV, Item, Date Range, and Group PO Ignore.

The Loadlist contains two colors, each with its own meaning. Yellow means partially planned and Green means fully planned or in fully production.

For Single Plan:

Anywhere in the RAW, double-clicking will bring up a Planning Window.

For Group Plan:

Company: Rim Pack Co. Location: Banani-04 Buyer: All Buyer Prod. Dept. Int

Job No: Style Ref. PO No: Int

Date Type: Shipment Date Status: Confirmed Plan Status: All Date: Start 01-1:

Booking No: Prod. Cat: All Prod. Cat Alloc. Order: All Order Type: All Order

Select All PO Quantity:

Style Ref. No	Internal Ref.	Product Category	Item Name	Complexity Level	Job Qty

Operations:

The 'Operation List' can be opened by clicking the right mouse button on the plan or strip.

- For splitting the plan, there are two different kinds of 'Split Operations'.
- The 'Separate All PO' operation is used to separate all of the Color or PO that were included in the Group Plan.
- Multiple line plans are completed on the same day using the 'Equalizer' function in order to keep the ShipDate.
- Backward/Forward is used instead of drag drop to move the plan in same line.
- The 'Merge Line' function is utilized if the plan needs for two lines.
- The 'Revise Plan' function is utilized when the plan's Target, MP or SMV need to be changed.
- 'Plan Details' contains all of the plan's information.
- 'Capacity Adjustment' is used for changing the line's Work Hours.
- 'Supply chain' is used for material tracking. This page contains information about TNA , Fabric Details & Accessories Details as per the PO.

-PO Tracking is used to track the planned Style.

-The 'Block Line' function is used for Subline-Mainline blocks.

Auto Balancing:

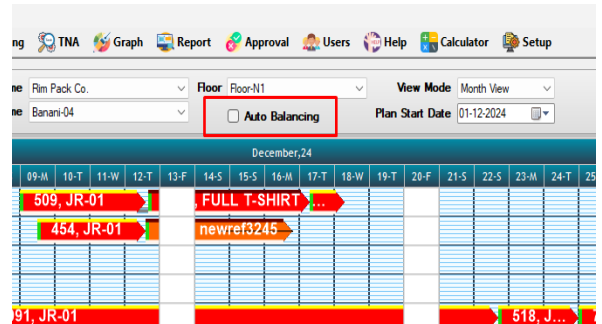

By balancing the daily production according to the plan, this method effectively shortens the strip.

This is done in two ways.

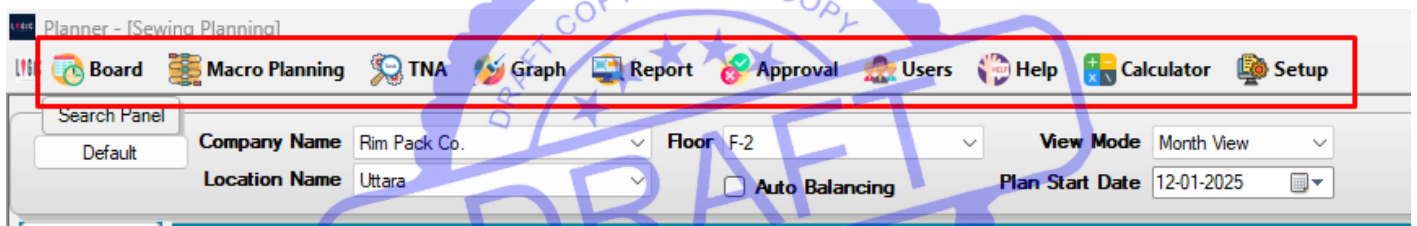

1. With Push 2. Without Push

With Push: In this case, Auto-Balance removes the production data from the plan and resets the plan strip to the current date.

Without Push: In this case, Auto-Balance removes the production data from the plan and puts the strip where it should be according to the calculation.

Menu Bar:

Some menus are still in development.(Macro Planning,TNA,Graph)

Report:

This field provides plan-related reports. In addition, all other reports are in Platform.

Approval:

The plan summary is displayed in this field from where the approval request is submitted.

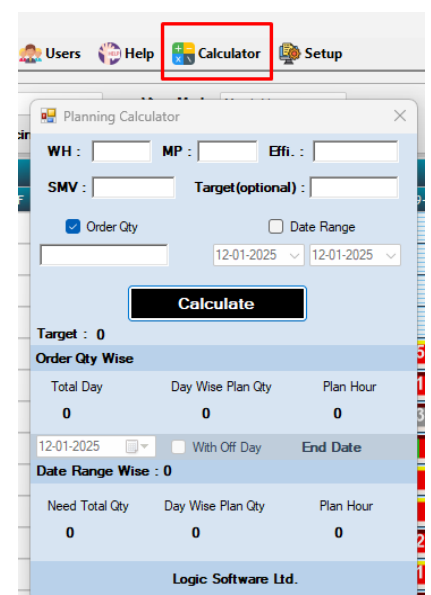

Users:

This field will provide the list of users allocated to the Planning Board.

Planning Calculator:

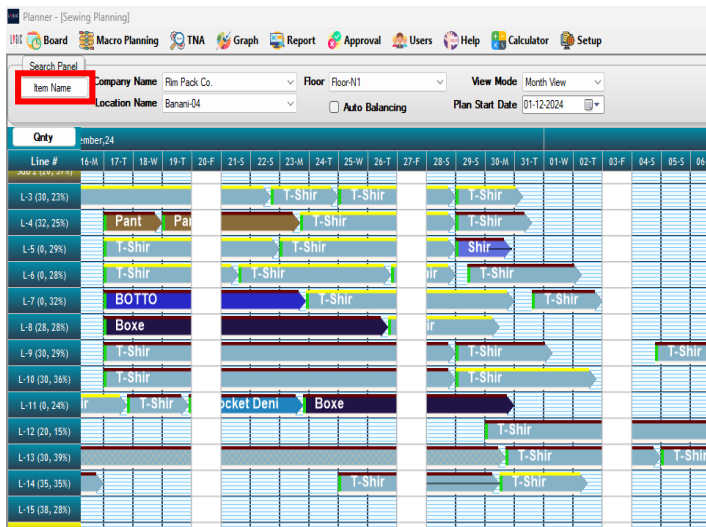

Before undertaking planning, This Calculator is used to determine the Company's capacity or target. Also this calculator determines how many days to plan or how much may be produced per day based on the order quantity.

Setup: It works for both the load-list's column sequence and column hide-show.
